Ethernet-Enabled Serial Devices using NS-Link COM/TTY Driver

DeviceMaster Serial Tunneling using TCP Socket Communications

DeviceMaster® RTS 8-Port DB9/RJ45

The Control DeviceMaster RTS 8-Port DB9/RJ45 is an eight-port device server designed for network-enabling serial communications devices. When used with the included NS-Link™ driver software and a host PC, the DeviceMaster RTS enables placement of COM or TTY ports anywhere on an Ethernet network or across the Internet. In

applications where connecting legacy serial devices to a PC without software changes is a requirement, a pair of DeviceMaster RTS units can be used to create a point-to-point serial tunnel across the network that seamlessly transfers serial data via TCP or UDP socket connections.
